PROFILE

I am an organizational and behavioral researcher.
I have a background in software engineering.
I conducted six months of workplace ethnography inside a software organization.
I studied how management policies, incentives, and control systems affected team behavior.
I examine the gap between what people say and what people do.
I develop clear diagnoses and practical recommendations.

SKILLS

- Ethnographic fieldwork
- Systems analysis
- Cross-group triangulation
- Organizational diagnosis
- Behavioral modeling
- Hypothesis testing
- Stakeholder analysis
- Semi-structured interviewing
- Executive reporting

SELECTED RESEARCH

Surface Compliance, Silent Resistance Jan–Aug 2026

Workplace Ethnography · Independent Study · Flagship Case

Research question: When management introduces control policies to improve productivity, what behavioral patterns appear in the team?

- I observed a 7-person software team for six months as an active member.
- I tracked how control policies reduced trust and discretionary effort.
- I developed the Control-Trust-Output Loop model.
- This model shows how control policies created the same problems they aimed to solve.
- I proposed three practical interventions.
- In the second phase, I documented the final escalation and exit process.
- I identified a structural mirror: management avoided direct accountability in the same way it punished employees.

Full case study and slide decks available on request.

The Six-Week Silence 2026

Qualitative Research Exercise

- I investigated a five-person team.
- One unverified assumption changed team behavior for six weeks.
- I reconstructed the chain of assumptions.
- I reframed the problem from individual blame to a system failure.
- I proposed a simple intervention to detect assumption shifts early.

PROFESSIONAL EXPERIENCE

Software Development Engineer Jan 2026 – Aug 2026

DevLoops Technologies Pvt Ltd

- I conducted a six-month embedded ethnographic study of an engineering team while working as a developer.
- I analyzed how control policies affected trust, effort, and output.
- I built production platforms for clients in the UK, Canada, Netherlands, USA, and India.
- I designed role-and-permission systems that controlled information flow and decision rights.
- I shipped a live healthcare platform used by active clinics.

Software Development Trainee / Intern Mar 2025 – Dec 2025

DevLoops Technologies Pvt Ltd

- I built full-stack modules for international clients.
- I delivered a multi-language CMS and data migration for a Netherlands company.
- I developed logistics software for a US-based trucking company.

EDUCATION

B.Tech, Mechatronics 2020 – 2023

ITM Vocational University · CGPA 7.85

Diploma, Mechatronics 2017 – 2020

ITM Vocational University · CGPA 7.00

TECHNICAL BACKGROUND

I have practical experience in full-stack development (React, Next.js, TypeScript, NestJS, Node.js, AWS).
This experience helps me understand how technical systems and organizational structures interact.
