SHIKHAR SHUKLA

Business Operations & Operational Diagnosis

Vadodara, Gujarat, India · shikharshukla678@gmail.com · +91 9825496937
Portfolio: shikhar-research.vercel.app · LinkedIn · Substack

PROFESSIONAL SUMMARY

Operations-focused professional with a software engineering background and hands-on experience diagnosing execution friction inside teams. Conducted a six-month embedded study of a development team, identifying how control policies, unclear requirements, and decision structures reduced discretionary effort and worsened delivery outcomes. Translates operational diagnosis into practical recommendations for process clarity, accountability design, and cross-functional alignment. Seeking Business Operations Analyst or Process Improvement roles where diagnosing why systems underperform is central to the work.

CORE COMPETENCIES

- Process Improvement & Business Process Analysis
- Stakeholder Management
- Operational Diagnosis & Systems Thinking
- Structured Analysis & Reporting
- Root Cause Analysis
- Cross-functional Collaboration
- Requirements Gathering
- KPI Tracking & Data Analysis

SELECTED WORK

Surface Compliance: How Control Policies Reduced Output

Independent Operational Diagnosis · Six-Month Embedded Study · Jan – Aug 2026

- Conducted continuous observation inside a 7-person development team while production software was delivered for international clients.
- Documented how structural control policies (presence rules, restricted breaks, uncompensated overtime) produced surface compliance while discretionary effort and voluntary overtime collapsed.
- Formalized the Control–Trust–Output Loop: a model showing how controls that leave root causes untouched (unclear requirements + deadlines set without developer input) systematically reduce trust and output.
- Identified a clear inflection point — a public, uncontestable blame event — after which the team shifted from frustrated-but-present to active disengagement and open job search.
- Designed practical interventions focused on requirements clarity, developer inclusion in deadline commitments, outcome metrics over presence tracking, and proper MVP definition.

Six-Week Silence: How One Unverified Assumption Changed Team Behavior

Qualitative Diagnostic Exercise · 2026

- Reconstructed how a single unverified assumption altered collective behavior in a five-person team for six weeks. Reframed the issue from individual blame to a system-level failure in information flow. Proposed a lightweight early-detection intervention.

PROFESSIONAL EXPERIENCE

Software Development Engineer (Operational Observation)

DevLoops Technologies Pvt Ltd · Jan 2026 – Aug 2026

- Delivered production software for clients in the UK, Canada, Netherlands, USA, and India while simultaneously diagnosing how formal processes, control policies, and decision rights shaped team performance.
- Analyzed the interaction between delivery process design and lived practice — documenting how unclear requirements and unconsulted deadlines repeatedly regenerated output problems that control policies could not resolve.
- Worked on a live healthcare platform used by clinics, gaining exposure to multi-role operational workflows and real-world delivery constraints.

Software Development Engineer Trainee / Intern

DevLoops Technologies Pvt Ltd · Mar 2025 – Dec 2025

- Delivered full-stack modules for international clients, including multi-language CMS, data migration, and logistics software. Observed cross-cultural coordination pressures and delivery constraints that later informed operational diagnosis work.

EDUCATION

B.Tech, Mechatronics · ITM Vocational University · 2020 – 2023 · CGPA 7.85
Diploma, Mechatronics · ITM Vocational University · 2017 – 2020 · CGPA 7.00

Self-directed development in operational diagnosis, process analysis, and organizational systems through extended independent fieldwork and writing.

ADDITIONAL

Independent writing on organizational systems and process friction (Substack). Full case studies, methods notes, and presentation materials available via portfolio. Comfortable producing clear written synthesis for both operational and leadership audiences.
